

KACO SYSTEMS

MAXIMIZE PERFORMANCE AND SECURITY WITH A THOROUGH NETWORK ASSESSMENT

*When you partner with **Kaco**, you get access to **specialists who go beyond the basics**. Our experts dive deep into your network infrastructure to evaluate its health, performance, and security, taking the time to understand your unique requirements upfront so we equip you with a **scalable, high-performing network that's ready for the future**.*

EXPERT-LED STRATEGY FOR YOUR SUCCESS

With years spent in the field conducting network assessments in various environments and contexts, we've developed the expertise to identify best practices and define what optimal performance truly looks like. Our team leverages this knowledge to craft **a precise roadmap** that drives your business forward.

CLEAR VISIBILITY, CONFIDENT ACTION

Gain valuable insights about your network and the barriers standing between you and achieving smoother, faster workflows. Our assessment provides actionable strategies to improve performance, streamline the user experience, and make both your employees and your team's work more efficient and satisfying.

COMPREHENSIVE NETWORK EVALUATION, NO STONE LEFT UNTURNED

We evaluate every layer of your infrastructure, from device logs and event correlations to configuration analysis and software lifecycle status. This comprehensive review aims to root out your weaknesses, helping you avoid unexpected downtime, improve efficiency, and future-proof your network for your evolving business needs.

YOUR PATH TO NETWORK OPTIMIZATION

STEP 1

Understanding Your Vision

We start by consulting with you about your priorities and your network's current state: **what's working, what's not**, and what keeps you up at night. These insights guide our assessment, helping us **zero in on the roadblocks** that limit your ability to achieve your objectives.

STEP 3

Aligning Your Infrastructure with Your Goals

We evaluate your business needs alongside our findings about your network to strike the ideal **balance between security, scalability, and performance**. Through **detailed capacity planning**, we determine the resources necessary to close any gaps and equip your network for **long-term success**.

STEP 2

Dissecting Your Infrastructure in Detail

Once we understand your network from a business perspective, we seek to understand your existing infrastructure and determine your **performance baseline**. We thoroughly evaluate every component to **uncover strengths, expose vulnerabilities and identify cost-saving opportunities**.

STEP 4

Crafting Your Customized Roadmap

We create your network report card, **outlining the remediation steps for any identified issues, a rough cost estimate, and an explanation of each step's positive impact** on your network performance and connection to your broader goals. Everyone in your organization will be able to read this document and understand why investing in these improvements will make their work life better.

STEP 5

Unpacking Key Insights Together

We meet with you to **walk through our findings**, offering insights into your current infrastructure, the necessary changes, and what the improved setup will look like. We'll explain the next steps to get you there, leaving you with a clear understanding of why your network isn't performing as it should, how to budget for improvements, and **a strategic plan going forward**.
